MİMARİ TASARIM

I drew inspiration from the main scheme of building butterfly theme and the symbol of eternity. The project, when drawing dream too can be performed and sustainable a project to draw targeted. We have used Reflective glass on the exterior of building because we take advantage of the light and the solar day on the surface of transparent glass panels have benefited from solar energy.our building workshops, offices, collaboration areas(linoleum from made of iron- footed) raised flooring used, so we have created cables, and turned off the heating tube consisting of visual pollution and tidy work environment. Also we have used fire escape, and fire door in the building. We have used motion sensor for doors, and LED lights in the parking lot and bulding. We have used ceramic on the floor in the third basement because this easy for clean. We have four elevator (1 disabled, 1 management, and 2 worker)in the bulding. The building's terrace to terrace to provide savings in both aesthetic appearance of one cafe, one pub, one we do foyer area so revealing that we create as an environmentally friendly building design ser were both working, we have created greenery filled a clean environment for guests and management elements of our building with gray water systems water we store storing rainwater our water tanks we use for savings in garden watering and toilet urinals, we used underfloor heating and natural ventilation in our building, we drew a helipad in the garden of our building for emergency meetings, we think that the company might. We have used Autocad, Revit and 3ds max programs on the project.
